

Wanwu Facts Publisher

Compliance evidence for a private, single-owner publishing client that uploads original educational videos to one owner-controlled channel.

Single authorized owner | Two minimum OAuth scopes | No public accounts | No engagement automation | 30-day API data limit

Field	Value
API client	Wanwu Facts Publisher
Operator	Independent developer / sole proprietor
Google Cloud project ID	vaulted-acolyte-503301-u0
Google Cloud project number	32758473057
Authorized channel ID	UCr240l6wo4xEH45LKd1TreA
Public documentation	https://izeowz-coder.github.io/wanwufacts-api-compliance/

Prepared 23 July 2026

No API keys, OAuth codes, access tokens, refresh tokens or user login credentials are included in this evidence pack.

1. Application purpose

Wanwu Facts Publisher converts the operator's already verified source material into original Mandarin educational videos. It creates an original script, narration, subtitles, graphics, thumbnail and rendered video; performs source and safety checks; verifies the immutable authorized channel ID; and uploads only to the owner-controlled Wanwu Facts channel.

Access boundary

- No public sign-up, customer dashboard or multi-tenant access.
- The only OAuth user is the channel owner.
- The client is not sold and does not operate unrelated third-party channels.
- It does not automate views, likes, comments, subscriptions or recommendations.

Owner controls

- The owner authorizes OAuth and confirms the immutable channel ID.
- The owner selects scheduled public, private or unlisted visibility.
- Title, description, tags, visibility, schedule, source evidence and safety audit are recorded before upload.
- Production requires separate API-audit and automation switches; missing approval fails closed.

Normal volume

Two uploads per week: one landscape video and one vertical Short from the same approved topic. This is approximately 104 videos.insert calls per year. The default quota is sufficient.

2. API use and OAuth scope rationale

Requested OAuth scopes

- **youtube.upload** - required to upload original owner-approved videos.
- **youtube.readonly** - required to verify authenticated channel identity and processing status.
- No YouTube Analytics, Reporting, full-account management, Google Drive, Gmail or profile scopes are requested.

Method	Purpose	Stored result	Maximum retention
channels.list	Verify authenticated channel ID.	Channel match result.	30 days
videos.insert	Upload owner-approved video and metadata.	Video ID, schedule, result.	30 days
thumbnails.set	Attach original thumbnail.	Success or failure.	30 days
videos.list	Confirm processing succeeds.	Temporary processing status.	30 days

Video metadata and visibility

The client always supplies title and description. The account owner can choose scheduled public, private or unlisted. Scheduled publication is implemented by uploading privately with a future publishAt value, as required by the YouTube Data API. The client does not change the visibility of existing videos.

3. Architecture and data flow

1	Owner consent	OAuth grants upload and channel-read access.
2	Local production	Original script, audio, graphics and video.
3	Safety audit	Sources, claims, media and metadata checked.
4	Identity lock	Authorized channel ID must exactly match.
5	Upload and verify	Upload, processing check, record, then prune.

Execution environment

- GitHub Actions runs the private application from a private source repository.
- OAuth client ID, client secret, refresh token and expected channel ID are stored as repository secrets.
- Rendered media and evidence are produced in the runner; temporary audit artifacts expire after no more than 14 days.
- The public documentation repository contains no credentials and no private production source code.

Fail-closed controls

- OAuth token refresh must succeed.
- The authenticated channel ID must equal UCr240l6wo4xEH45LKd1TreA.
- The API compliance approval flag must be present.
- The separate automation flag must be present for scheduled runs.
- Safety, source and media checks must pass before upload.

4. Privacy and authorized data

The client uses YouTube API Services only for channel verification, upload, processing confirmation, retry safety and publication records. It does not sell API data, profile viewers, serve advertising or disclose authorized data to unrelated third parties.

Data accessed

- Channel ID and basic channel metadata.
- Owner-created title, description, tags, thumbnail, video file and schedule.
- Upload-session information, video ID and temporary processing status.
- OAuth refresh token retained only while the authorization remains active.

Retention and deletion

- Completed YouTube API response data is automatically deleted no later than 30 days after completion.
- Build and audit artifacts expire after no more than 14 days.
- Verified deletion requests are completed as soon as practical and within seven calendar days.
- Revocation is available through Google Account security settings.
- Deleting client-held data does not delete content stored by YouTube.

Security

- Least-privilege OAuth scopes.
- GitHub Actions Secrets; no secrets in source control or logs.
- Immutable channel-ID verification.
- Short artifact retention and automatic API-data pruning.
- Separate compliance and automation switches.

5. Evidence and review checklist

Public documentation

- Homepage: <https://izeowz-coder.github.io/wanwufacts-api-compliance/>
- Privacy Policy: <https://izeowz-coder.github.io/wanwufacts-api-compliance/privacy.html>
- Terms of Use: <https://izeowz-coder.github.io/wanwufacts-api-compliance/terms.html>
- Deletion and revocation: <https://izeowz-coder.github.io/wanwufacts-api-compliance/data-deletion.html>

Actual screenshots to attach separately

- Google OAuth consent page showing the API client name and both requested YouTube scopes.
- Google Account third-party access page showing the revocation path.
- GitHub Actions manual-run page showing scheduled public, private and unlisted choices.
- Dry-run manifest showing title, description, visibility and schedule without uploading.

Operator attestation boundary

The applicant must enter their legal name, contact email and required attestations directly in the official form. Credentials and tokens must never be included in screenshots, documents or support correspondence.
